

Gaming

What is Gaming exactly?

Gaming is an act of playing games. There are several ways of playing games such as video games, computer games, or even gambling. Statistics show that over 97% of teens aged 11-16 play video games. 86% percent play video games on consoles, such as Xbox, PS4. How can we tackle this?

Advantages?

There are some advantages for playing games. For instance, to get rid of stress, for entertainment or even boredom. This is why everyone is addicted in playing games.

Disadvantages?

There really aren't any disadvantages. I mean who doesn't like playing games...Anyways, there is one disadvantage. HEALTH. Looking at a bright screen for a long time can

damage your eyes and your mental health but if you're a gamer, then it can affect you even more because as a gamer, you would play games for 3/4 of the day and the other 1/4 sleeping.

Symptoms?

Many people are addicted to gaming. These people are usually above 18 + so... Anyways there are also people who are under 18 and are addicted. This can have many side effects such as restlessness. His basically means when you won't stop playing games and if you out somewhere you still concerned about that one thing.

Genres?

Many genres have been created. From Action to racing to even puzzles. Every person has a different point of view. Someone might like simulation games. However, someone else might like adventure games. Gaming is such a big part for

teenager's life's.

Always

18+ games right? Even if there like 12 years old.

Latest Console?

Everyone wants the latest consoles. This can be a PlayStation or Xbox. However, Nintendo ups the stakes, releasing The Nintendo Switch. This is going worldwide. Every kid will want to have this console. As a 13-year-old, I think that this game is very bad for its price. From Game, it's around £279.99 just for this. Instead, you could buy a PS4 for roughly £249.99 which is a lot of better.
