

Tech Triumph

Technology is seen as a bad thing now, especially screen related things like Computer, phones or tablets. Kids in this generation at least own one smart device if they can afford it. However, technology isn't all bad, there are a lot of positive things about technology, if the person using it knows how to use it and limit certain things. Technology is now everywhere for example in hospitals, they use technology in things like pacemakers, heart monitors, X-Rays and for medicines. These things are possible with the help of technology. Also, technology is used in entertainment for example games, movies or music, for when people are bored, this helps pass time.

We asked the Game shop in Highcross about their views on tech. We asked a staff member a few questions. His response was positive about tech, he said things like it helps him with his daily life, he also said he enjoys working around tech. But he also said that there are quite a few bad things about tech as it can malfunction and it can be hacked. He also said he likes Apple better, but only because it's the only phone he has...

We asked two teachers in The City of Leicester College, one was a media teacher, Ms Kazi. And one was a computer science teacher, Mr Rauf. Ms Kazi said that she uses tech for teaching and for her normal life, for example she said that now people can order things like clothes and food online, and it will get delivered straight to your house. Using tech means that life is a lot easier for anyone who uses it and it also means they can contact and talk to people miles away without using a landline. She said that the bad things about tech are that many people can hack it and many people can and do get cyberbullied on these platforms.

Mr Rauf said that tech is a good thing and there have been a lot of developments/advances in the tech industry in a span of a decade than ever before. He also says that computing and coding is a good job, as if you make a good program companies can buy it off you. You could possibly sell it for millions, making you a MILLIONAIRE! He also said there are bad things like hacking and over use of screen related tech like iPads and computers.
